

Separation law quarrel

According to "Separation law" the preparation and arrangements of agricultural corps were separated from Industry, mine and trade Ministry and transferred to Agriculture Ministry.

Because of this transition some individuals protested and accused Agriculture Ministry to inefficiency about fruits and broiler markets. Studies have showed, in spite of without any fruit import, the problems were less than expectation. About the fluctuations in broiler cost, it is not a new problem and has along duration from many years ago. The experiences in the last year showed that the government was successful to control the inflation, regulation of supply and demand and related subjects, so, it seems that these doubtful actions are greedily.

Why specialists say Unspecialized words

It seems that it is not supposed to unspecialized ideological observations in agriculture and animal husbandry change to real prospects. And some of authorities in current government, aggravate the matter mistakenly or deliberately.

In a visit to Babol – kenar line poultry that organized by public relation office of Jihad-e-Keshacarzy ministry, some specialists hinted to unreal objects. For example one of them said "just now 3% of chickens are produced by this farm and it is predicted to share about 15% of global market in this way.

He added: "according to currencies instability, we forecast to provide 100% of domestic needs". This resource had told: "Iran is the 8th country in producing line poultry in the world". Another person who is in an upper grade has said: "Till 1380, (2001) this complex has supplied a bout 85% of domestic needs, but now it is decreased to less than 5%." We think these subjects are not true and the responsible must reobserve their opinions.

Oil cost reduce and it's affect on Iran agriculture

Reducing oil cost, from more than 100\$ to about 75\$ per barrel is fixed nearly. Many of important centers in global oil markets believe that this shock in not transient because of the stormy situation in Middle-East. They forecast that any increase in oil cost to 100\$ in short term is improbable.

Because of above subjects, Iranian govenerns decided to regulate the next year budget on 75\$ per barrel. On the other hand, increasing of the currencies rates have some affects on Iran economy and reduces Iranian purchasing ability. From 25 to 30 %.

In agriculture, we are facing to two economical phenomenons: first, to buy the inputs more expensive and the second is to change the currencies in Rials to improve the agriculture sector.

Thus, oil cost reduce will affects the agriculture sector more than economy sections and will stop the evolution in agriculture sector.

In the name of GOD
