

In spite of 2, 500, milliard tomans credit, Mechanization Condition is not desired

Eng. Abbas Keshavarz, agriculture ministry assistant reviewed the mechanization condition in one day summit. He said that he is not satisfied about mechanization improvement and criticized it. He added, mechanization in dry farming is about zero, because there is no any program for dry farming.

Dr. Kambiz Abbasi, Mechanization Centre Director, accepted the critics about dry farming, but said the guilty are domestic manufactures and producers that have no good activities in these areas. Eng. Keshavarz, also criticized the quality of planters and added, many of farmers are not satisfied about these implements because they use more than double of seeds per hac. In beet, wheat, barley and peas cultures.

Water: Shortage, Crisis, Security threat

Specialized Editor of Agri-Industries Infrastructures Mag. M. Rajol Dezfuli reported that Alaeddin Boroojerdi, national security commission director, criticized the water condition and named it as a (security threat). In the last years, most of the government responsible has abstained to call this water condition as a “crisis”, but it was.

Nearly all of 31 provinces are face to water crisis and thousands of villages have no water to drink in hot summer. Everybody talk about the water crisis, but no one do his/her duties for the matter. All of the Middle East countries and North Africa are in water stress and according to NASA, the condition will be worse till 2030. Water crisis has caused many problems like villagers emigration,

Abandon the farms, unemployment, and many others for the country.

Two reports from both sides of the world

This is title of the translation of two reports: “6 steps on how to feed a pregnant mare” and “Countries commit to climate smart agriculture” that translated and edited by Massoud Ansari, journalist and graduate student of economics and business at Oxford Brooks University.

JCPOA and Future of Agriculture Background of Iran

M. Ansari editor in chief write: In July 14, 2017, two years have passed from Comprehensive Plan of Action between Iran and 5+1 countries. A multilateral agreement which result from global diplomacy. After JCPOA the sanctions that affected economy, industry, agriculture, banking, etc. were removed and new areas were appeared in production.

The main question is that what effects has had JCPOA on Iran's agriculture? Iran's agriculture needs to new technologies, innovations, new systems of seeds production, the ways to reduce evaporation dam basins, mechanization and etc.

Of course, agriculture like other economy sectors will face to new grounds in future and the first step is the evolution in infrastructures.

We have to see in a new outlook to WTO and survey the export and import regulations. So, after the execution of JCPOA, Iran agriculture will change completely.

Passing the Personalism and compile global program

Eighteen years after amalgamation of both agriculture and Jihad Sazandegi Ministries, the selection a minister has not such importance. The main propose of these negotiations and lobbies are around the abilities of the next minister.

Till now, more than 20 individuals announced their readiness or candidacy for agriculture ministry. Every next agriculture minister must believe the global changes in agriculture.

Now, we have tens of car manufactures in the country, but only a few producers of agriculture machinery. The next minister must know the self-sufficiency is not only buying the wheat in guaranteed cost. In 12th government, the next minister must address new theoretical subjects in agriculture, trade and global interactions.
