

cussed.

Generally, agriculture needs to many things like new technologies, fertilizers, chemicals, seeds, genetics, machinaries and implements before cultivation, and we have to supply some of them from other countries. On the otherhand, the marketing for crops surpluses has high importance. 11<sup>th</sup> cabinet has understood the international interactions to enhance the economy. Such actions show the comprehension of water crisis in agriculture and droughts that can be continued in future years.

## **Climate Change or Dismangement?!**

Climate differences are a part of nature's essence. But, human interference in the nature caused to damage the level of the balance between the details of the nature. Till 1391 (2012), all of the problems that happened in agriculture sector debited to global climate changes. But, abusing from water resources and dismanagements in last three decades, caused, magnificent problems that we see now. To issue illegal permission for digging the wells and oversight to unpermitted wells, are few parts of dismanagements. Plannig and establishing of 200 dams on every river or stream on the pretext of sustainable improvement, caused to evaporate billions cubic of water from the pools in the back of these dams.

On the other hand, the sun shines more than 300 days regardly on this country yearly and we can produce all of the electrical needs by this way.

Just now, the results of these dismanagements are water crisis in the country and sagging many of the plains. However, Iran socity must suffer the results of those dismanagement till unclear future.

## **Unbelivable Rate of lead in Iranian Poultry**

In a T.V. program the executer announced that the percentage of the lead metal in Iranian broilers is 47 times more than global standards.

To say such a subject seems to be scoffing and shows that T.V.Programers have no any information about poultry industry in the country . It is clear that the poultry industry imports soy and maize from Canada, Brazil or USA. In addition, it produces about 2/000/000 tons of broiler and consumes more than 14/000/000 tons of food yearly. According to this speech, every one of 20/000 poultry farm can do as a lead factory.

Such words are nonsense and show that the announcer has not competence.

We suggest to Iran T.V. responsables to consult to experts and specialists before showing such a program or have a report from related unions.

## Seven Basic Indicators to Compile Strategies In Agriculture Sector

It Seems that basic strategic indicators in agriculture sector are distinguished gradually. Many years ago, we had to produce agricultural crops domestically without any attention to costs, basic resources like soil and water, environment, and trade relations, or with / without help from government. In that same years, many thought that the best ministries are who present the most statistics without any attention to the quality and final net prices. In that procedure, consumer`s healthy and their purchasing power were not considered.

Any way, according to editorial opinion nine strategic indicators in agriculture sector must be taken into consideration as follow:

- 1- Investment to save under ground water resources.
- 2- Investment to optimise water usage and its productivity
- 3- Investment to increase dry material in lieu of one liter of water
- 4- Consider to preference of agriculture products
- 5- Trade of unreal water by importing the crops
- 6- Plan to cultivate in other regions and countries
- 7- Improve international relations to cheapen imports and increase export benefits.
- 8- Support private sector for export the products
- 9- Extend international interactions to exploit technology and innovations

Utilizing above indicators can make a space with previous trends and plan new programs.

### **Editorial: Villages evacuation; the bells that not heard**

According to national Institute on population study, about 40/000 villages are evacuated and the rural population percentage has decreased From 70% to less than 30% This trend can be seen in poor districts more quickly. But, Why the responsables can`t hear the sound of these bells?

### **Improving International Relations, necessary to Sustainable Agriculture**

In last years, many essays about agriculture improvement and international relations were issued and analyzed by Damparvaran magazine. In those essays some subjects like the necessity to join W.T.o and cultivation in other regions were dis-

In the name of GOD
