

that this amount of dams are not useful, because there is no enough water to save in the back of them. Further more dam constructors do not believe that these walls caused to destroy farm lands, woods, under – ground waters and ecosystems.

If we continue to dam construction we will loss many of nationl resources.

Few creative Suggestions to guarantee reclaiming 550/000. Ha. Of Khozestan Proviencie

Huge plan to reclaim 550/000. ha. Of khozestan and Ilam farmlands, showing the essential looking to agriculture sector. It is clear that all of the farmers in that region are not able to supply the costs of such a plan, therefore government`s action is the most logical function to develop infrastructures.

Small farms are the worst difficult in agriculture sector. So, we hope to concrete the small farms and create big ones.

By this way, utilizing of machineries and implements will be easy and many of the costs will decrease. Another suggest is to creat cooperations by farmers to save their benefits.

New suggestion, “Insure the stabilizing of costs and incomes” for farmers

In a familiar meeting, Eng. Mamood Hojati, agriculture Minister and Dr. Gh. Astani, managing director of poultry cooperation, surveiyed the insurance of stabilizing of costs and incomes.

The necessity to insure agriculture crops and animal and poultry products is because of risks about them. Dr. Astani said, we can insure all of the crops on the base of their guaranteed costs. So, if the prices decrease, no one of farmers or poultry producers suffer any losses.

Establishment of Evaporation tubs by the name of Dam construction a historical imprudence

Iran is in an arid and semi – arid geographical region that its raining average is about 230mm per a year, which is about one – third of global average.

At the other hand the evaporation average is 3 times more than global average. In these 3 decades more than 600 dams are established all over the country and this term is continued.

Every year, more than milliards cubic meters of water are evaporated from these evaporation tubs. Many of experts believe that countinuing this historical imprudence must be stopped.

A Dam Which annihilate Khozestan Provience must be demolished

Gotvand Dam was constructed in 1382 (2003) in the north of Khozestan provlence. The main mistake about this dam is the selection of its place. Salt mountains are in the back of the dam that are drowned in the basin water.

Afer the dam was inaugurated, because of dissolving of the salts, the water of karoon river was salted extermly. Just now, these salts are transferd to agricultural lands, so they are destroy. In addition, this salted water ruins environment. So, many suggest that this dam must be demolished.

Expanding Dam Construction, industrial improvement or national loss

Dam construction has an ancient past about 2500 years in Iran . Before 1357 (1978), all of the dams in Iran were only 19, but in 30 years more than 600 dams were constructed.

It is few years that the Iranian responsables observed
